## Reliable, cost-effective email and SMS messaging for users at sea or on land

Compatible with almost all satellite systems, SkyFile Mail is your ideal solution for email and messaging at sea, on land or in flight. Simple to install, use and update, SkyFile Mail works on any desktop Windows-PC or laptop.

Used together with prepaid services, crew members need only one card for prepaid voice and data. SkyFile Mail (Entry and Premium services) are fully compatible with any email software, such as Microsoft Outlook, allowing easy integration with existing programs and making it an ideal messaging tool for users onboard.

### Crew Communications

SkyFile Mail is the optimum tool for personal communications thanks to its ideal crew features. With flexible and versatile options, crew can create and configure their own prepaid accounts, use the same software for prepaid and postpaid messaging and stay independent without their personal usage linking to the master accounts. With anticipated costs displayed and the ability to define their own limitations, crew can communicate securely and self-sufficiently.

### Key Benefits

- Easy administration of your satellite terminal and enhances your operational efficiency
- One service, three different solutions to match your business and budget needs
- Maximise cyber security with password encryption and new password management capabilities
- Fully compatible with any email software, allowing easy integration with existing programs
- Optional HTML compatibility to receive or send formatted content, or save data by using plain text mode
- Minimal manual configuration and automatic updates ensures less risk of misuse
- Benefit from SkyFile® eNOAD software for efficient creation & submission of electronic regulatory forms required by the US Coast Guard

## A 'Multi-Modal' Platform

### Features

- Simple to install, use and update, SkyFile® Mail eases administration of mobile satellite terminals and enhances operational efficiency
- Remote overview and management of SkyFile Mail accounts in Portal360: monitor traffic, blacklist, whitelist or quarantine messages and download usage logs
- Improved cyber security with password encryption and new password management capabilities in Portal360
- Precise position, speed and vessel direction information via SkyFile Mail's GPS Data Reporting function (SkyFile Premium only)
- Individual, password-protected sub-accounts mean multiple users can simultaneously access SkyFile Mail even without a Local Area Network
- Automatic detection of the active connectivity device in use automatically applies the predefined rules and features related to that profile
- Split billing function sorts communications traffic into cost centres to facilitate re-billing
- Automatic File Transfer (AFT) simplifies the recurrent transmission of important files and makes fully automatic file' storage

- Global account configuration is mirrored and backed up on the SkyFile server, ensuring important data such as emails, billing logs and contact details are always protected
- Available in more than 10 languages including Russian, Chinese and Turkish

### Compatibility

SkyFile Mail is compatible with all main broadband connectivity services offered by Marlink and other providers including Sealink VSAT, Inmarsat and Iridium.

### Complementary solutions

#### CyberGuard Endpoint Security

Our CyberGuard Endpoint Security (EDR) service provides next generation endpoint protection designed for maritime, to secure end-user devices and quarantine sophisticated malware in real-time.

#### SkyFile eNOAD

To comply with the latest US Coast Guard regulations, we offer its Notice of Arrival and Departure (NOAD) software for SkyFile® Mail.
