

# MARLINK

Advancing energy operations

## Satellite hybrid networks for onshore & offshore

### Enable your critical operations with managed internet connectivity over satellite

When you're working in remote locations, staying productive, safe and connected is essential. That's where we come in. Our team handles your network setup from start to finish so you can focus on running smarter, safer and more efficient operations, no matter how far off the grid your site is.

### Customised, secure network solutions to help you succeed on land and offshore

We build strong, flexible networks that blend multi-orbit satellite communications (LEO, MEO and GEO) with terrestrial and cellular technologies.

Marlink combines leading satellite services from Starlink, O3b mPOWER and Eutelsat OneWeb with your existing setup to give you the best possible connection, wherever you are. Because we are technology-agnostic, we always choose the right tools for your needs.

Our solutions include a suite of end-to-end managed network and IT services such as orchestration tools, traffic control and cyber security, seamlessly integrated to improve efficiency and user performance.

Designed for low-latency, high-speed connectivity, our services are scalable, allowing you to adjust bandwidth and capacity as your needs evolve. Whether expanding to new sites or increasing data transfer, we can provide the solution you need.

### Key Benefits

To ensure you get the most from your network, Marlink helps you optimise the reliability of your connections and maximise the performance of your applications.

Modular and scalable solutions - customised network design and seamless integration of multiple networks

Customer portal for real-time monitoring, activation and administration of your networks

Dedicated Service Delivery team, so your needs are met

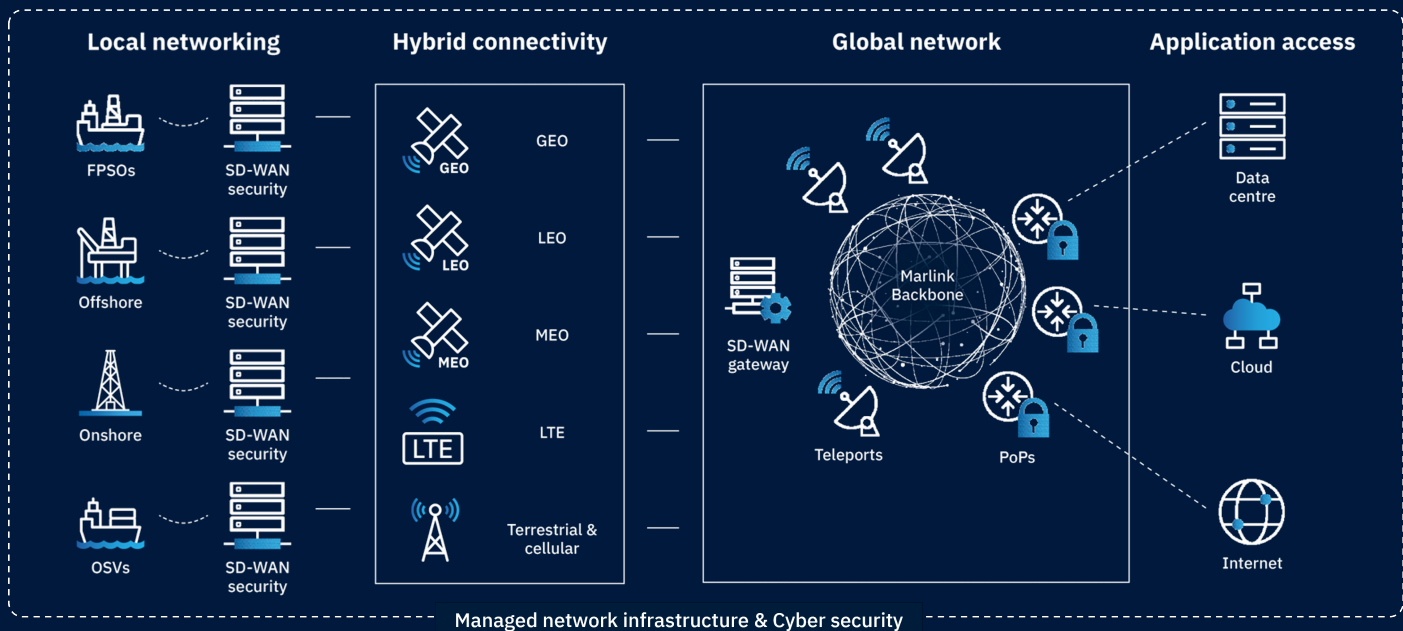

Premium 24x7 customer support and Network Operations Centre (NOC)

Cyber security solutions to protect your corporate information technology environment (IT) and your industrial infrastructure (OT) from cyber threats

SD-WAN (Software-Defined Wide Area Networking) orchestration to enhance reliability, optimise bandwidth use and prioritise data flows and consumption

## Managed infrastructure, powered by cyber security Built for remote energy sites

### Key services

- Unparalleled connectivity: seamlessly blend of LEO, MEO, and GEO for the highest levels of uptime and performance
- Customised network: have a network designed to your needs and streamline your WAN and LAN networks for better efficiency and assured reliability - from traffic priorities and configurations, to application prioritisation, ensuring your operations never stop
- Dynamic smart routing and quality of service: get optimised hybrid network and IT management, cloud, and edge computing, to enhance your corporate network resilience, application performance, and user experience
- Robust cyber security: protect your data and prevent attacks with the latest cyber security technology integrated in your network - aligned with global and regional compliance, such as IMO, SOCI Act, NIS2, and NIST 2.0
- Managed services: from design, delivery, network management and field operations, to operational security and customer support, our people are there for you 24/7 to support your business
