

Build the right GMDSS strategy for every vessel

Maritime safety communications are changing. Is your GMDSS strategy ready?

Whether you're maintaining proven Inmarsat C services, introducing Iridium Certus GMDSS, or planning future upgrades, Marlink helps you build the right safety architecture for your fleet-without unnecessary complexity or forced migration.

Rather than replacing what's already working, we help you make informed decisions based on each vessel's operational profile, trading area and long-term plans.

Why shipowners choose Marlink

Not every vessel needs the same GMDSS configuration. We help you decide where to retain trusted Inmarsat C services and where Iridium Certus GMDSS can add value through broader coverage and modern capabilities.

Build resilience into your safety communications

Support regulatory compliance while improving operational resilience with distress alerting, MSI, LRIT, SSAS and voice services across multiple satellite technologies.

One partner for your entire safety estate

Simplify provisioning, airtime, hardware lifecycle management and support through a single maritime safety partner with one commercial relationship and one operational team.

Your priority	Inmarsat C by marlink	Iridium Certus GMDSS by Marlink	How Marlink helps
Maintain compliance	Proven IMO-compliant GMDSS service with distress alerting, MSI, LRIT, SSAS and SafetyNet.	IMO-approved next-generation GMDSS with distress alerting, voice and MSI.	Independent advice based on your operational needs -not a forced migration programme.
Improve resilience	Established GEO coverage trusted across global shipping for decades.	Global pole-to-pole LEO coverage with voice and data capabilities.	Build a dual-network safety strategy that strengthens operational resilience.
Upgrade at the right time	Continue using existing Inmarsat C where it remains commercially and operationally appropriate.	Upgrade when equipment lifecycle, operating areas or business requirements justify the move.	We develop a practical migration roadmap that minimises cost and operational disruption.
Simplify operations	Expert 24/7 support, single billing and customer portals.	Delivered with the same Marlink support organisation and service experience.	One provider, one support team and one commercial relationship across your safety services.
Future-proof your fleet	Reliable technology that continues to meet many operational requirements.	Modern platform supporting voice alongside GMDSS services.	Technology planning aligned with your long-term fleet strategy rather than individual products.

The right strategy isn't always replacing what's already onboard

Many fleets will continue to benefit from Inmarsat C for years to come. Others are ready to introduce Iridium Certus GMDSS on selected vessels.

Marlink helps you evaluate every vessel individually, balancing compliance, resilience, operational requirements and total cost of ownership to create the right long-term safety strategy.

Lets review your fleets GMDSS strategy

Our specialists can help you
