

## What you need to know about the SKYFILE MAIL REVAMP

As previously communicated, Marlink has recently revamped its popular SkyFile Mail suite of services to create a harmonised and clearer portfolio.

As part of [SkyFile Mail](#), three main package types are now offered:

- **SkyFile Mail Lite** - ideal for smaller user groups and our service provider partners; this option provides the well-known quality of service, robustness and simplicity of SkyFile Mail, enabling easier management of accounts either per user or via pools, at a very attractive price.
- **SkyFile Mail Entry** – formerly known as the ‘Classic’ package, this option brings additional, valuable features such as Outlook compatibility, Over the Air (OTA) updates and email quarantine.
- **SkyFile Mail Premium** – ideal for professional business use, this option brings a huge range of additional services and benefits, including the new ‘Smart Profile Management’ service.

The latter come with additional, optional services activated on top of them, creating ‘SkyFile Mail Entry+’ and ‘SkyFile Mail Premium+’.

- **SkyFile Mail Entry+** brings the possibility to register Premium services on top, including: Terrestrial Network Access, GPS Data Reporting and Smart Profile Management.
- **SkyFile Mail Premium+** offers the possibility to register Alternative Satcom Carriers on top.

In parallel, an activation interface is also becoming available in Portal360, which will make managing your SkyFile accounts simpler than ever before!

Please refer to the reference table on the next page for a full overview of the features and capabilities related to each service.

Meanwhile, please note that other services within the SkyFile Suite (SkyFile Anti Virus, SkyFile eNOAD and SkyFile Crew) remain unchanged.
