

RELIABLE, COST-EFFECTIVE EMAIL, FAX AND SMS MESSAGING FOR USERS AT SEA OR ON LAND

First established almost 20 years ago, SkyFile Mail is one of Marlink's most popular Value Added Services, with more than 40,000 mariners utilising the service daily.

Available across VSAT, Inmarsat, Iridium and Thuraya satellite terminals, SkyFile Mail is simple to use and update and works on any desktop Windows-PC or laptop. Used together with Universal Card, crew members need only one card for prepaid voice and data.

SkyFile Mail (Entry and Premium services) are fully compatible with any email software, such as Microsoft Outlook, allowing easy integration with existing programs and making it an ideal messaging tool for users onboard.

CREW COMMUNICATIONS

SkyFile Mail is the optimum tool for personal communications thanks to its ideal crew features. With flexible and versatile options, crew can create and configure their own prepaid accounts, use the same software for prepaid and postpaid messaging and stay independent without their personal usage linking to the master accounts. With anticipated costs displayed and the ability to define their own limitations, crew can communicate securely and self-sufficiently.

Key Benefits

Easy administration of your satellite terminal and enhances your operational efficiency

One service, three different solutions to match your business and budget needs

Maximise cyber security with password encryption and new password management capabilities

Fully compatible with any email software, allowing easy integration with existing programs

Minimal manual configuration and automatic updates ensures less risk of misuse

Benefit from SkyFile® eNOAD software for efficient creation & submission of electronic regulatory forms required by the US Coast Guard

A 'Multi-Modal' Platform

FEATURES

- Simple to install, use and update, SkyFile® Mail eases administration of mobile satellite terminals and enhances operational efficiency
- Remote overview and management of SkyFile Mail accounts in P360: monitor traffic, blacklist, whitelist or quarantine messages and download usage logs
- Improved cyber security with password encryption and new password management capabilities in Portal360
- Precise position, speed and vessel direction information via SkyFile Mail's GPS Data Reporting function (SkyFile Premium only)
- Individual, password-protected sub-accounts mean multiple users can simultaneously access SkyFile Mail even without a Local Area Network
- Automatic detection of the active connectivity device in use automatically applies the predefined rules and features related to that profile
- Split billing function sorts communications traffic into cost centres to facilitate re-billing
- Automatic File Transfer (AFT) simplifies the recurrent transmission of important files and makes fully automatic file' storage
- Global account configuration is mirrored and backed up on the SkyFile server, ensuring important data such as emails, billing logs and contact details are always protected
- Available in more than 10 languages including Russian, Chinese and Turkish

COMPATIBILITY

SkyFile Mail is compatible with all main broadband connectivity services offered by Marlink, including Sealink VSAT, Inmarsat and Iridium.

Also in the SkyFile Suite:

SKYFILE ANTI-VIRUS

SkyFile® Anti-Virus is a complete anti-virus software package, providing your vessels or remote PCs and networks with protection against viruses and other external threats.

SKYFILE ENOAD

To enable users to comply with the latest US Coast Guard regulations, Marlink offers its Notice of Arrival and Departure (NOAD) software for SkyFile® Mail.
