The Product Development Manager imagines and designs the solutions in coordination with Marketing, selects and manages external suppliers and vendors for the flawless execution of development projects, supervises the validation and the deployment in operation, contributes to the success of the commercial launch.

MAIN ACTIVITIES:

- Development of products from high-level concepts to product launch and handover to operational teams
- Drive functional and technical specification, implementation, test and documentation
- Issue RFP toward potential integrators and software development contractors
- Manage outsourced development and integration projects
- Coordinate with product management team and operational teams upfront to implementation
- Coordinate with IM to support user portal implementation where appropriate
- Contribute to the overall products development roadmap
- Perform the acceptance tests and supervise the operational deployment prior to commercial launch
- Deliver progress reports, technical documentation and presentations
- Lead support escalation process towards software manufacturers

QUALIFICATION:

- Master Degree in Engineering, Computer Sciences and Telecommunications
- Significant education (Master degree) and strong experience (+5 years) in project management
- Strong, hands-on experience in software development, latest web and database technologies
- Strong education and experience in IP networks
- Experience as System and/or Network architect is a plus
- Experience in working with consultancy and vendor
- Fluent English both written and oral

PERSONAL SKILLS:

- Strong communication skills
 - Creative, innovative, curious, team-player, open-minded, autonomy
 - Leadership, willingness and ability to take initiative and work independently
 - Ability to work in international environment, willingness to travel
-
