

4G SERVICES

With 4G Services, ships can use alternative carriers to Marlink's VSAT to benefit from seamless connectivity.

Marlink's 4G Services include a portfolio of low latency, high bandwidth multicarrier solutions to provide high quality connectivity anytime, anywhere. The solution, including offshore Tampnet LTE and Global4G terrestrial services, is designed to complement our Sealink VSAT services and to further secure the reliability and high bandwidth needs for vessel and fleet management.

By using 4G Services, you remain connected even when the VSAT is unavailable or must be switched off.

Based on the user's predefined parameters, Marlink's hybrid connectivity offer seamlessly combines multiple communication carriers (SatCom and terrestrial) to provide the best available link. Thus ship owners maintain full control of how communication is routed via a management interface, allowing them to set priorities according to their own requirements and preferences at any given time.

Compatibility

4G Services are available for all Sealink users as well as a standalone connectivity option.

Key Benefits

Global4G:

Cost-efficient communications provided through terrestrial 3G/4G technologies

- Data rates of up to 300 Mbps on 4G+
- One SIM that can be used in >110 countries around the world
- Attractive money allowance packages to suit all business and leisure needs
- Integrated in Marlink network infrastructure
- Compatible with several digital solutions

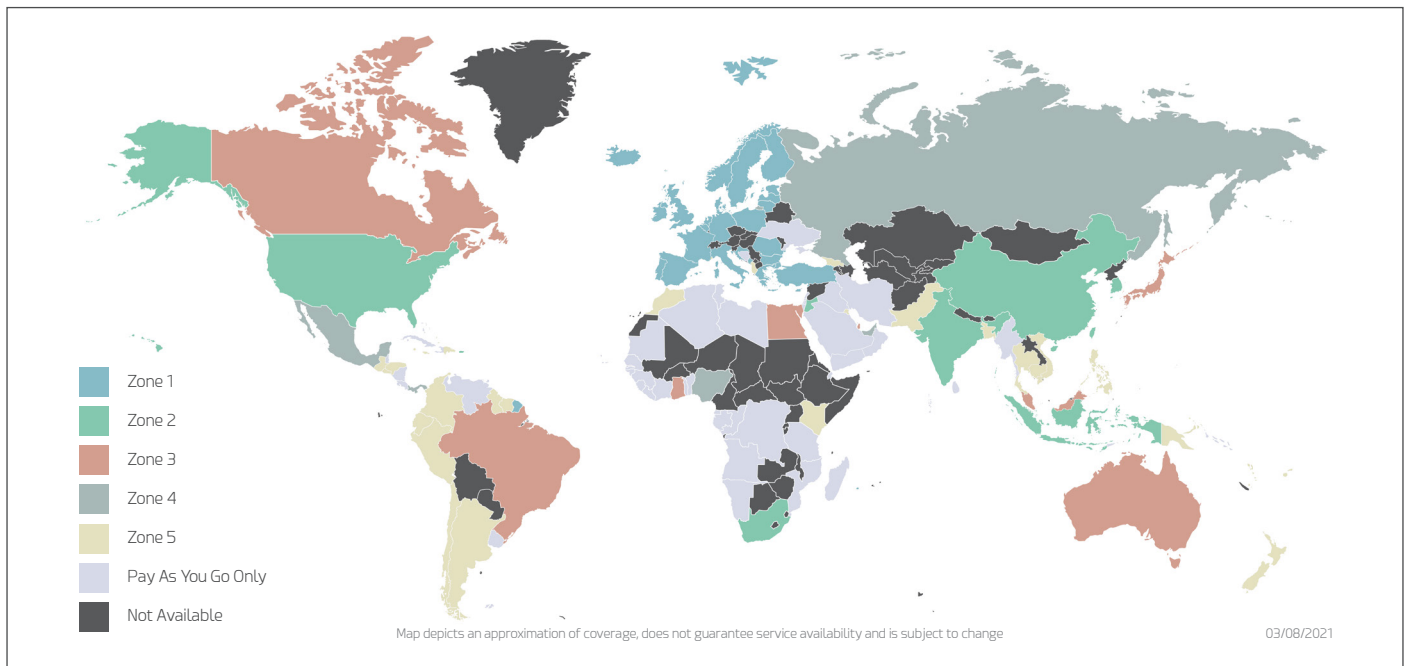

Tampnet LTE:

- World's largest offshore high capacity communication network
- Tampnet low-latency LTE service up to 50 Mbps
- Dedicated Service North Sea and Gulf of Mexico APN
- Proactive monitoring option available

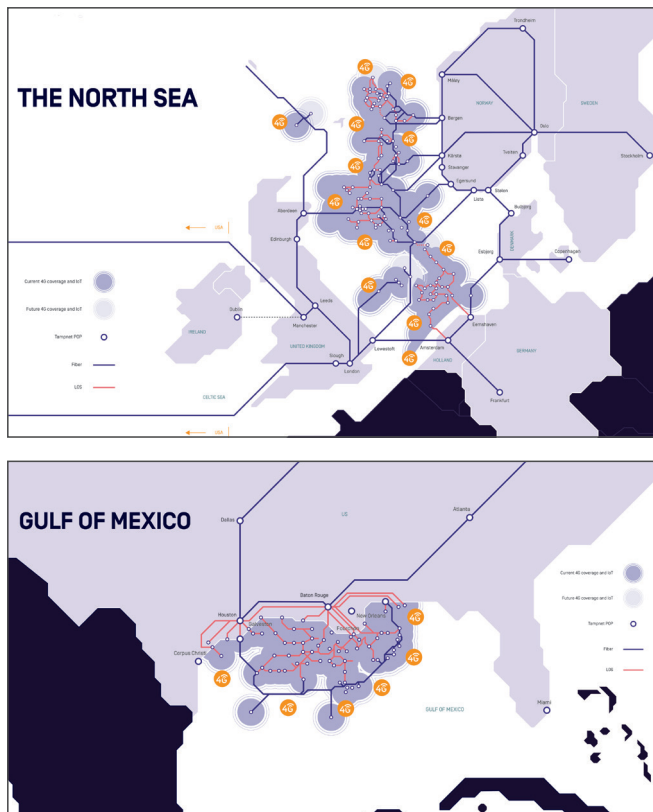

Near Coastal WiFi:

Optional WiFi – connect to wireless networks with bandwidth up to 100 Mbps when ports are within reach

Global 4G coverage

Tampnet coverage

Recommended digital solutions

- **SkyFile AntiVirus:** Marlink's complete anti-virus software package, providing remote onboard PCs with protection against viruses and other external threats
- **SkyFile Mail:** Marlink's messaging and compression tool providing reliable and cost-effective email, fax, and SMS messaging
- **DataManager:** provides a variety of versatile features to make managing data traffic more efficient, including e.g. web filtering and enhanced firewall
- **Cyber Detection:** monitors your communications for any threats that may be putting the confidentiality and continuity of your business operations at risk
- **XChange:** centralised IT and communications management to optimise security, enable remote access and support and motivate crew
- **XChange URA:** provides secure, network-independent access to all devices connected to an XChange
- **@SEAwebControl:** blocks access to specific websites, restricts access to bandwidth-consuming services and gives priority to legitimate Internet usage
