

## 4G/5G SERVICES

With 4G/5G Services, ships can use alternative carriers to Marlink's VSAT to benefit from seamless connectivity

Marlink's 4G/5G Services include a portfolio of low latency, high bandwidth multicarrier solutions to provide high quality connectivity anytime, anywhere. The solutions, including offshore Tampnet LTE and Global 5G, are designed to complement our Sealink VSAT services and to further secure the reliability and high bandwidth needs for vessel and fleet management.

By using 4G/5G Services, you remain connected even when the VSAT is unavailable or must be switched off.

Based on the user's predefined parameters, Marlink's hybrid connectivity offer seamlessly combines multiple communication carriers (SatCom and terrestrial) to provide the best available link. Thus ship owners maintain full control of how communication is routed via a management interface, allowing them to set priorities according to their own requirements and preferences at any given time.

### Compatibility

4G/5G Services are available for all Sealink users as well as a standalone connectivity option.

### Key Benefits

#### Global5G:

Cost-efficient communications provided through terrestrial 4G/5G technologies

- Data rates of up to 895 Mbps on 5G
- One SIM that can be used in >110 countries around the world
- 5G available in more than 50 countries
- Attractive money allowance packages to suit all business, leisure and crew welfare needs
- Integrated in Marlink network infrastructure
- Compatible with several digital solutions

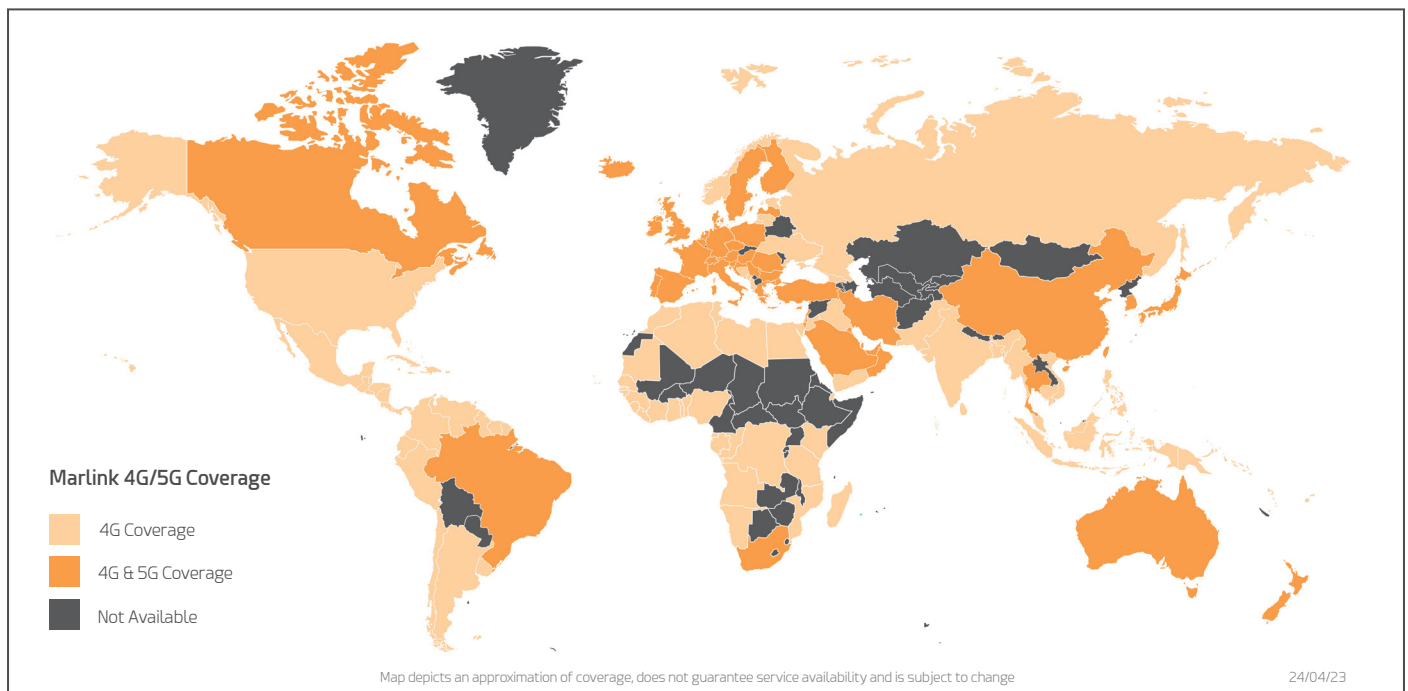

#### Tampnet LTE:

- World's largest offshore high capacity communication network
- Tampnet low-latency LTE service up to 50 Mbps
- Dedicated Service North Sea and Gulf of Mexico APN
- Proactive monitoring option available

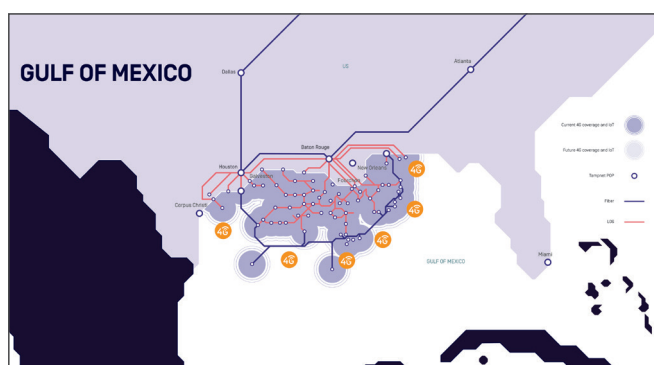

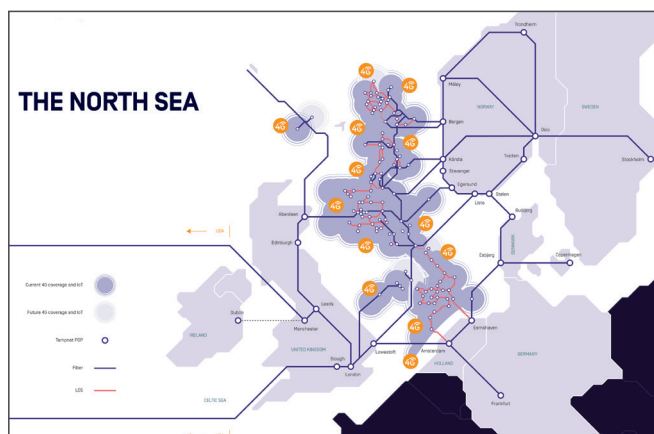

#### Near Coastal WiFi:

Optional WiFi – connect to wireless networks with bandwidth up to 100 Mbps when ports are within reach

## Sealink NextGen

As the world leader in maritime connectivity, our technology-agnostic strategy ensures we can provide you with the ideal solution to best fit your needs. Leveraging our partnerships with 4/5G GSM providers, satellite network operators (across GEO, MEO & LEO) and technical partners (Fortinet, Microsoft, AWS, etc.), we help you get the best out of the latest technologies for your business-critical operations.

Harnessing our XChange platform packed with expertly designed tools and applications, we deliver the ideal blend of the best connectivity the industry has to offer, and expertly design and manage your network resulting in a watertight, optimal user experience.

We support your digital enablement and provide satellite-optimised solutions such as remote IT access, cyber security, and data access and capture via IoT systems to serve you as a provider of advanced solutions, taking you beyond connectivity.

Are you ready to integrate 4G/5G Services into your remote operations?

To ensure you unlock the full potential of your connectivity, contact us, or visit [marlink.com](http://marlink.com).
