

ENABLING the connected world

BGAN Link benefits

- > All-you-can-eat broadband data - subject to a 30GB fair use policy
- > Cost control - BGAN Link is charged at one fixed monthly price so you can easily budget communications expenditure for your project
- > Regional, reliable service – deploy BGAN Link and get reliable connectivity with 99.9% availability over our I-4 network
- > Low power – Terminals have low power consumption and can run off mains or batteries. The batteries can be charged through solar panels
- > Easy to set up – BGAN Link can be deployed in minutes and doesn't need specially trained staff

BGAN Link

Reliable, regional, broadband data service designed to provide high monthly volumes of always-on Standard IP data for sustained periods of operation

BGAN Link is our reliable, affordable broadband service designed for long-term operation in one location. The service is offered on an all-you-can eat basis, with one monthly fee, making it easy to budget for your project's communications requirements. And because BGAN Link is powered by our global L-band satellite network offering 99.9% availability, you can be assured of dependable, always on connectivity, whenever and wherever your project requires it in the supported regions.

Communications for teams out in the field implementing a remote project, for example a construction unit building a dam in a remote location, or a community health project in a rural and isolated community, has always been a challenge. Cellular and terrestrial networks don't always extend to where your teams need to operate. Even when they do, these networks can become congested or the infrastructure they rely upon to operate can become damaged or degraded.

With BGAN Link, you can provide your remote teams with affordable, reliable broadband connectivity, no matter where the project is located in the supported regions. It provides a broadband data service with high monthly volumes of always-on Standard IP data, at speeds of up to half a megabit for sustained periods of operation. BGAN Link enables your teams working in remote areas to quickly and easily set up a remote office. Once connected, the project gains instant access to standard

workplace tools, such as email, web browsing and VPN, as well as collaboration tools like VoIP or video conferencing, so your teams can remain productive and you can progress the project together in real time.

BGAN Link is accessed through discreet plug and play terminals. They are quick and easy to set up with no technical expertise needed, and a broadband connection is established within minutes. The terminals' power consumption is low and batteries, if used, are easy to recharge using solar panels.

Affordable connectivity

Available in fixed monthly subscriptions, BGAN Link gives you full visibility and control of your budget. BGAN Link is available in either 3 or 12-month subscription periods, and both come with 30GB of data to use each month. Once the 30GB data limit is reached, speeds will be capped at a lower rate until the start of the next month's allowance. To give you further flexibility, you can arrange for the cap to operate daily,

so that your allowance accrues across the month, or monthly so you can use your entire month's allowance in a shorter period. BGAN Link is only offered in selected geographical regions – see the map below for more information.

Globally (outside or within the supported regions) we offer the BGAN Standard + plan which offers a similar allowance but with even more flexibility. Please contact us for more information on BGAN Standard +.

Mobile projects

Whilst BGAN Link is designed for sustained use in one location, we understand that projects move and change over time, so we offer the facility to re-locate your BGAN Link service up to four times per year. Additional mobility in a specified geographical radius can also be considered for specific mining, construction, resource exploration and humanitarian projects.

For companies operating in Sub-Saharan Africa, we have extended the facility to freely move your BGAN Link service at any time, anywhere in the region, and as many times as you need.

For our Media Sector customers who operate in Sub-Saharan Africa, we also offer Inmarsat's Media Link plan which is based around on-demand IP data and HDR Streaming Minutes instead of a

standard data quota, simplifying billing and provisioning. Furthermore, because Media Link is HDR, this allows broadcasters to use the latest generations of encoders to deliver high quality broadcast-grade pictures. Contact us for more information or with specific queries about your mobile project

BGAN Link features

BGAN Link offers a competitive alternative to fixed satellite options like Ku-band VSAT:

- > Reliable broadband internet with speeds of up to 492kbps
- > Available in 3 or 12 monthly subscriptions
- > Even outside our unrestricted mobility locations, you can apply to change the fixed location of your terminal within the supported regions up to four times a year free of charge
- > In special circumstances, restricted, non-chargeable mobility within a pre-defined geographic radius can be made available
- > Fair use policy applies to all users
- > Globally (outside or within the supported regions), BGAN Standard+ 2017 can also be offered to your customers. It provides a similar allowance to BGAN link plans but with even greater flexibility. Check specific BGAN Standard+ 2017 collateral or ask your Provider for more details

BGAN Link in use

Whilst BGAN Link can be used wherever there's a need for reliable remote connectivity in supported regions, we have also seen customers around the world use the service in multiple markets, such as:

Aid & Development

- > Remote connectivity for schools
- > Sustained connectivity for remote clinics

Banking and Finance

- > Remote bank branches
- > Connectivity for POS payments

Construction

- > Site setup
- > In-life site operation
- > Rolling infrastructure projects

Media

- > Remote news bureau connectivity

Mining

- > Longer-term mining projects
- > Mining camp connectivity
- > Crew welfare
- > Drilling and testing operations
- > Third-party camp management providers

Oil & Gas

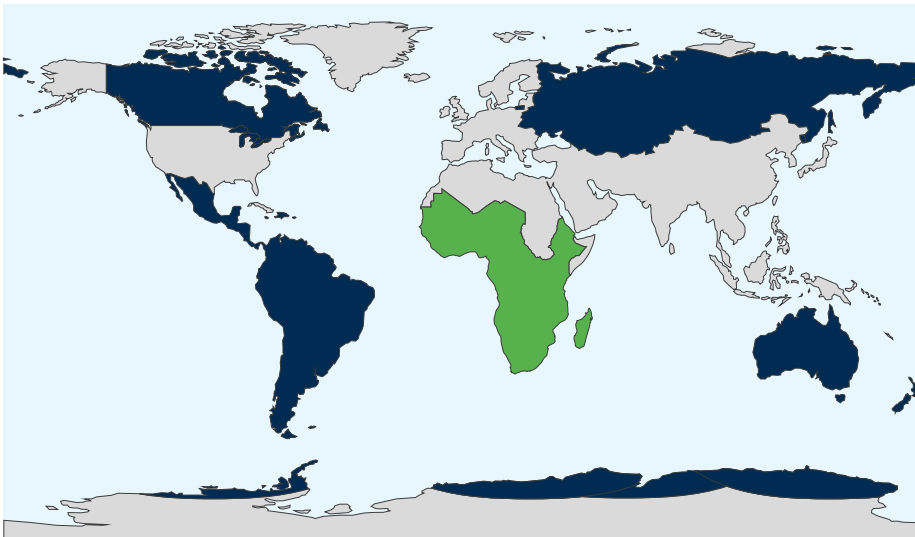

- > Primary communications backup
- > Resource exploration
- > Production

How to buy

Inmarsat offers its services through a range of partners in more than 80 countries around the world. Contact us for information on your local provider and to find out how our range of services and solutions can add value to your business:
